

Immunisation Policy

When groups of children are together, illness and disease can spread rapidly. Preventable diseases such as measles and whooping cough can have serious health consequences for children, especially young children. Staff members who work in an early childhood education and care service are also at increased risk of certain infectious illnesses. Immunisation is a simple, safe and effective way of protecting people against harmful diseases. Our Service implements the Australian Government Department of Health, 'No Jab No Play' policy.

National Quality Standard (NQS)

Quality Area 2: Children's Health and Safety		
2.1	Health	Each child's health and physical activity is supported and promoted
2.1.2	Health practices and procedures	Effective illness and injury management and hygiene practices are promoted and implemented
2.2	Safety	Each child is protected
2.2.2	Incident and emergency management	Plans to effectively manage incidents and emergencies are developed in consultation with relevant authorities, practiced and implemented.

PURPOSE

The purpose of this policy is to manage and prevent the spread of infectious illnesses and diseases. Our service has a duty of care to ensure that all children, families and educators are provided with a high level of protection during the hours of the services operation. This includes notifying children, families and educators when an excludable illness or disease is present in the service; maintaining a record of children's and educators' immunisation status; complying to relevant health department exclusion guidelines; and increasing educators' awareness of cross infection through physical contact with others.

SCOPE

This policy applies to children, families, staff, management and visitors of the Service.

IMPLEMENTATION

Immunisation is a reliable way to prevent many childhood diseases. Immunisation works by giving a person a vaccine (weakened or killed disease-causing bacteria or virus) against a particular disease. This makes the person's immune system respond in a similar way to how it would respond if they actually had the disease, but with less severe symptoms. If the person comes in contact with that germ in the future, their immune system can rapidly respond and prevent the person becoming ill.

Immunisation also protects other people who are not immunised, such as children who are too young to be immunised, or people whose immune systems did not respond to the vaccine. This is because the more people who are immunised against a disease, the lower the chance that a person will ever come into contact with someone who has the disease. The chance of an infection spreading in a community therefore decreases if a large proportion of people are immunised, because the immune people will not become infected and can protect the vulnerable people; this is known as 'herd immunity'

As of **1 January 2018** children who are unvaccinated due to their parent's conscientious objection will no longer be able to be enrolled in childcare in NSW. Children who cannot be fully vaccinated due to a medical condition or who are on a recognised catch-up schedule will still be able to be enrolled upon presentation of the appropriate form signed by a medical practitioner.

Management/Nominated Supervisor will

- Review children's immunisation each month, updating the child's records kept at the service, and sending reminder letters and emails for families.

- Ensure that evidence is provided for each child prior to enrolment that confirms the child is fully immunized for their age or has a medical reason not to be immunized (Immunisation History Statement from the Australian Immunisation Register (AIR) as evidence).
- Develop a staff immunisation record that documents each staff member's previous infection or immunisations (including dates).
- Require all new and current staff to complete the staff immunisation record.
- Update staff immunisation records as staff become vaccinated.
- Provide staff and families with information about vaccine-preventable diseases.
- Require all new and current staff to have a yearly flu shot
- Advise parents and families about the National Immunisation Program (NIP)
- Take all reasonable steps to encourage non-immune staff to be vaccinated.
- Document advice given to educators and other staff, and any refusal to comply with vaccination requests.
- Notify the Public Health Unit of any outbreak of vaccine preventable diseases (1300 066 055).
- Notify families when an outbreak of a vaccine preventable disease occurs
- Exclude any child who is not immunised from the Service if and when an outbreak of an immunise-able infectious disease occurs to protect that child and to prevent further spread of infection. In the instance of the child being immunised and the Immunisation record not provided to the Service – the child would be viewed as not being immunised.
- Advise any staff members who fall pregnant to visit their GP immediately and have a test for Cytomegalovirus (CMV) to check their immunity. Any pregnant staff member who is at a heightened risk will not change nappies and will double glove when coming into contact with any body fluids, especially saliva.

Families will

- Provide the Service with a copy of one or more of the following documents:
 - An AIR Immunisation History Statement which shows that the child is up to date with their scheduled vaccinations; or
 - An AIR Immunisation History Form on which the immunisation provider has certified that the child is on a recognised catch-up schedule; or
 - An AIR Immunisation Medical Exemption Form which has been certified by a GP
- Provide the service with an updated copy of their child's current immunisation record each time the child receives a new vaccination.
- A current AIR Immunisation History Statement can be accessed at any time by the parent/guardian through logging in to their Medicare online account: my.gov.au
- Support their child's exclusion from the Service if there is an outbreak of a vaccine preventable disease at the Service or if they come into contact with a person with a vaccine preventable disease, even if there is no outbreak at the Service.
